Included topics are basic understanding of signals and system, system concepts, Laplace transform, Z-transform, and MATLAB tool is used throughout the course.
33	Engineering	Electric Engineering	3	01ELE315	디지털제어	01	3	3	0	English	104900 / 객려해 / 조교수	Digital Control	In modern industrial fields, the needs on digitization and re-design of a conventional analog control system is increasing rapidly. Digital Control is based on the analog control theory learned by Automatic Control. And it is aimed to learn the digital signal processing techniques such as A/D and D/A conversion, z transform, and digital re-design theory, and is aimed to cultivate digital controller design ability with high reliability and high stability and its stability analysis.
34	Engineering	Electric Engineering	4	01ELE408	제어시스템설계	01	3	3	0	English	071900 / 최호림 / 교수	Control System Design	This course aims to provide students with design knowledge in systems and controls. Digital control systems design is conducted using transfer and state-space methods. Controller design is also made using Bode diagram. Systems comprised of digital and continuous subsystems, quantization effects, system identification, fuzzy controller, multi-variable and optimum control are here introduced.
35	Engineering	Chemical Engineering	3	01CHE308	유기공업화학	01	3	3	0	English	141790 / 김형수 / 교수	Industrial Organic Chemistry	This course uses unit process, inorganic synthesis and organic chemistry. Training in the organic industrial synthesis and manufacturing process corresponding to conversion and treatment process of all chemical products, which can be produced from petroleum and natural gas.
36	Engineering	Chemical Engineering	3	01CHE312	열및물질전달	01	3	3	0	English	195780 / 사정훈 / 부교수	Heat Transfer	This class is intended to provide an introduction of transport phenomena which includes heat and mass transport. This class will provide students with basic understandings of three mechanisms of heat transfer, i.e., conduction, convection and radiation. Students will learn how to calculate convective heat transfer coefficient and to design heat exchanger. This class also covers the fundamentals of mass transfer, i.e., mass transfer via molecular diffusion and convection, to provide relevant knowledge for the understanding and design of various mass transfer equipments.
37	Engineering	Chemical Engineering	3	01CHE312	열및물질전달	02	3	3	0	English	195780 / 사정훈 / 부교수	Heat Transfer	This class is intended to provide an introduction of transport phenomena which includes heat and mass transport.
